KIVU

Rapid Incident Analysis with Remote Data Collection

Kivu's patented technology dramatically cuts response times.

Effective incident response is all about speed. Losing valuable time to on-site travel can cost a business millions, which is why having access to an incident response service that can be run remotely is vital.

Kivu's patented proprietary technology tool scans IT systems remotely and securely to collect the forensic data required to investigate cyber-attacks. KECT (Kivu Enterprise Collection Tool) was engineered to find Indicators of Compromise (IOC) fast, enabling Kivu's expert analysts to quickly identify and resolve cyber incidents.

Since its first deployment in 2016 it has been used in over 600 cases, often within 30 minutes of the engagement kick-off call, which saves crucial response time during a cyber-attack.

KECT is:

Straight-Forward
KECT is easy to implement, with a simple download and minimal technical expertise clients can run the software on their networks without the need for on-site support.

Secure
The scope of data collected is determined specifically for each deployment, and all collected data is encrypted before being sent to secure U.S. or EU-based servers, depending on the user's location.

Scalable
KECT is agentless and can efficiently run on small networks and those of up to 100,000 endpoints. Once deployed it automatically executes until all required data has been collected and can then self-delete.

KECT is trusted by insurance and law firms worldwide as a reliable tool to minimize and mitigate the effects of cyber incidents. The benefits are clear:

- **Lower incident response costs:** no on-site personnel required
- **Fast analysis:** even large corporate networks are scanned in less than 60 minutes
- **Low client impact:** no software installation or calibration required

In recognition of this unique technology, KIVU was granted patent #10609065 for KECT by the United States Patent and Trademark Office in 2020.
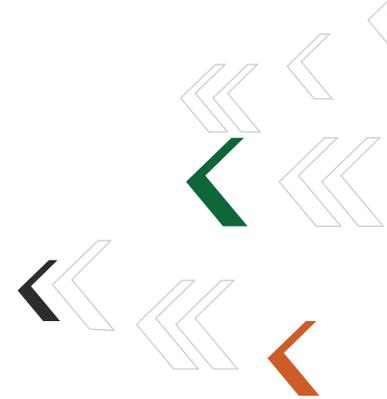

About Kivu

Kivu is a leading global cyber security firm that offers a full suite of pre- and post-breach services, specializing in the forensic response to cyber-attacks and ransomware incidents. We deliver cutting edge cyber security solutions to organizations in need and are a trusted cyber incident partner to insurance carriers and law firms worldwide.
